CLINICAL HEALTH PROMOTION
Research & Best Practice for patients, staff and community

Details on papers for Clinical Health Promotion

Original studies (IMRaD*):	Up to 3000 words and 50 references
Abstract	Up to 220 words
Reviews	Up to 4500 words and 100 references
Abstract	Up to 220 words
(All reviews should include a description on the search for evidence)	
Best Practice and Education	Up to 800 words (600 words and 1-2 figures and tables)
Editorials	800-1200 words and 10 references
Others (Cases, PhD thesis, comments)	Up to 700 words and 5 references

* IMRaD – Introduction, Methods, Results and Discussion

Reference style in Clinical Health Promotion

- References in the text are to be cited sequentially in the Vancouver numbering style. Please use Arabic numbers in brackets. E.g. … first defined by Nielsen and Small (5).
- Two references are cited separated by a semicolon, with no space between (2;5). Three or more consecutive references are given as a range with a hyphen between the numbers. E.g.: (5-8)
- References in tables, figures, and panels should be in numerical order according to their place in the text

The reference list should be performed according to the guidelines stated by the ICMJE-group (www.icmje.org). For Clinical Health Promotion the following exceptions apply:

- If there are six authors or fewer, please fill in all authors; surname space initials comma. E.g.: Thompson KA, Larsson C.
- If there are seven or more give the names of the first three, followed by et al If there are more than six authors on a given publication, only the first three authors should be stated in the reference list followed by “et al.”
  Punctuation mark after the name of the journal.
  No issue number of the journal, only volume number and page numbers.
- Journal titles should be abbreviated according to MEDLINE (www.nlm.nih.gov).

Example on reference list:

• Gögenur I, Kücükakin B, Bisgaard T et al. The effect of melatonin on sleep quality after laparoscopic cholecystectomy: a randomized placebo-controlled trial. Anesth Analg 2009; 108:1152-6.
• Nielsen AC, Alberdi F, Rosenbaum B. Collaborative assessment and management of suicidality method shows effect. Dan Med Bull 2011; 58:A4300.

• Laan MT, van Dijk MC, Staal MJ, et al. Electrical modulation of the sympathetic nervous system in order to agument cerebral blood flow: a protocol for an experimental study. BMJ Open 2011; 1:e000120.

Figures and tables
When presenting exact data use a table, whereas a graph is more adequate when the aim is to illustrate a tendency. Avoid three-dimensional presentations.

Do not present your data twice (e.g. in text and table or figure). Illustrations should be submitted in the original format, e.g. as PowerPoint or Excel files and pictures in jpg or tiff format.
All illustrations should be submitted as separate files. If an illustration has been published before, we need a written permission from the copyright holder if the illustration is going to be reproduced in your article. We strongly encourage the submission of illustrations including photographs.

- Figures should be attached in additional files preferably in .pdf (Alternatively .pgn or .jpg and in high resolution, 300 dpi or higher.)
- Descriptive text allows up to 30 words per figure or table.
- We urge all authors to consider the use of tables. If possible all tables should be attached in .doc format, otherwise preferably in .pgn or .jpg and in high resolution; 300 dpi or higher.

For submitted papers, we refer to the Requirements outlined by International Committee of Medical Journal Editors: http://www.icmje.org/

Authors
Authors should fulfil all three criteria for authorship set by the International Committee of Medical Journal Editors (ICMJE-group at www.icmje.org). This has to be stated in the authorship declaration and should be submitted with the article.

Authorship credit should be based on
1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data;
2) drafting the article or revising it critically for important intellectual content; and
3) final approval of the version to be published.
Authors should meet conditions 1, 2, and 3.

Each of the authors' contribution could be presented as follows:
Conception and design: TLS, HP.
Acquisition of data: TLS.
Analysis and interpretation of data: TLS, HP.
Drafting, revising and final approving of the article: TLS, HP.

CLINICAL HEALTH PROMOTION
Research & Best Practice for patients, staff and community

Conflicts of interest
Any conflicts of interests for the submitted paper in the form of an "ICMJE Uniform Disclosure Form for Potential Conflicts of Interest" (**Link to CoI form**) should be submitted for each author of the paper. These forms should be submitted when sent with the article. The CoI forms will be made visible in the online archive of all published articles.

Trial registration
All studies, which include human subjects, should be registered on an open web-site such as e.g. www.clinicaltrials.gov. The registration number should be included in the abstract of the original article or protocol article after "funding" as well as in the methods section in the paper.

Copyright
Articles published in Clinical Health Promotion are "open access". This means that the articles are distributed under the terms of the Creative Commons Attribution Non-commercial License, which permits any non-commercial use, distribution, and reproduction in any medium, provided the original author(s) and source are credited.
